

General

Guideline Title

Best evidence statement (BEST). Using oral cryotherapy to prevent oral mucositis in patients receiving chemotherapy.

Bibliographic Source(s)

Cincinnati Children's Hospital Medical Center. Best evidence statement (BEST). Using oral cryotherapy to prevent oral mucositis in patients receiving chemotherapy. Cincinnati (OH): Cincinnati Children's Hospital Medical Center; 2013 Jun 20. 5 p. [5 references]

Guideline Status

This is the current release of the guideline.

Recommendations

Major Recommendations

The strength of the recommendation (strongly recommended, recommended, or no recommendation) and the quality of the evidence (1a-5b) are defined at the end of the "Major Recommendations" field.

It is strongly recommended that patients being treated with bolus 5-fluorouracil (5-FU), melphalan, or high dose carmustine, etoposide, cytarabine, and cyclophosphamide (BEAC) chemotherapy regimens receive oral cryotherapy during the infusion to prevent, or reduce the severity of, oral mucositis (Worthington et al., 2011 [1a]; Nikoletti et al., 2005 [2a]; Svanberg, Ohn, & Birgegard, 2010 [2a]; Katranci et al., 2012 [2b]).

Notes: There is not enough evidence to make a recommendation for or against the use of oral cryotherapy in patients being treated with methotrexate (Worthington et al., 2011 [1a]). There was no evidence found related to the use of oral cryotherapy with other chemotherapy drugs.

Definitions:

Table of Evidence Levels

Quality Level	Definition
1a† or 1b†	Systematic review, meta-analysis, or meta-synthesis of multiple studies
2a or 2b	Best study design for domain
3a or 3b	Fair study design for domain
4a or 4b	Weak study design for domain
5a or 5b	General review, expert opinion, case report, consensus report, or guideline

Quality Level	Definition
	Local Consensus

†a = good quality study; b = lesser quality study

Table of Language and Definitions for Recommendation Strength

Language for Strength	Definition
It is strongly recommended that... It is strongly recommended that... not...	When the dimensions for judging the strength of the evidence are applied, there is high support that benefits clearly outweigh risks and burdens (or visa-versa for negative recommendations).
It is recommended that... It is recommended that... not...	When the dimensions for judging the strength of the evidence are applied, there is moderate support that benefits are closely balanced with risks and burdens.
There is insufficient evidence and a lack of consensus to make a recommendation...	

Note: See the original guideline document for the dimensions used for judging the strength of the recommendation.

Clinical Algorithm(s)

Scope

Disease/Condition(s)

Oral mucositis

Guideline Category

Prevention

Clinical Specialty

Nursing

Oncology

Intended Users

Advanced Practice Nurses

Nurses

Physicians

Guideline Objective(s)

To evaluate, among patients of all ages receiving chemotherapy, if oral cryotherapy compared to no intervention reduces the severity of, or prevents, chemotherapy-induced oral mucositis

Target Population

Oncology or bone marrow transplant patients being treated with bolus 5-fluorouracil (5-FU), melphalan, or high dose carmustine, etoposide, cytarabine, and cyclophosphamide (BEAC) chemotherapy regimens

Note: The guideline does not include patients with malignancies of the head or neck; patients who are unable to eat or drink; and patients who are developmentally or physically unable to perform the intervention.

Interventions and Practices Considered

Oral cryotherapy

Major Outcomes Considered

Reduced severity or prevention of chemotherapy-induced oral mucositis

Methodology

Methods Used to Collect/Select the Evidence

Searches of Electronic Databases

Description of Methods Used to Collect/Select the Evidence

Search Strategy

- Databases: MEDLINE, CINAHL, Scopus, the Cochrane Library
- Search Terms: mucositis, stomatitis, cryotherapy, chemotherapy
- Limits, Filters, Search Dates: English language, humans, 1990-present
- Date Last Search Done: March 12, 2013

Cost Analysis

A formal cost analysis was not performed and published cost analyses were not reviewed.

Method of Guideline Validation

Peer Review

Description of Method of Guideline Validation

This Best Evidence Statement (BEST) has been reviewed against quality criteria by two independent reviewers from the Cincinnati Children's Hospital Medical Center (CCHMC) Evidence Collaboration.

Evidence Supporting the Recommendations

References Supporting the Recommendations

Nikoletti S, Hyde S, Shaw T, Myers H, Kristjanson LJ. Comparison of plain ice and flavoured ice for preventing oral mucositis associated with the use of 5 fluorouracil. *J Clin Nurs*. 2005 Jul;14(6):750-3. [PubMed](#)

Svanberg A, Ohm K, Birgegard G. Oral cryotherapy reduces mucositis and improves nutrition - a randomised controlled trial. *J Clin Nurs*. 2010 Aug;19(15-16):2146-51. [PubMed](#)

Worthington HV, Clarkson JE, Bryan G, Furness S, Glenny AM, Littlewood A, McCabe MG, Meyer S, Khalid T. Interventions for preventing oral mucositis for patients with cancer receiving treatment. *Cochrane Database Syst Rev*. 2011;(4):CD000978. [PubMed](#)

Type of Evidence Supporting the Recommendations

The type of supporting evidence is identified and graded for each recommendation (see the "Major Recommendations" field).

Benefits/Harms of Implementing the Guideline Recommendations

Potential Benefits

Prevention of oral mucositis in patients receiving chemotherapy

Potential Harms

Nausea, mouth sensitivity, and headache were the most common adverse effects of cryotherapy, although it should be noted that nausea may be the result of the chemotherapy rather than the cryotherapy.

Qualifying Statements

Qualifying Statements

This Best Evidence Statement addresses only key points of care for the target population; it is not intended to be a comprehensive practice

guideline. These recommendations result from review of literature and practices current at the time of their formulation. This Best Evidence Statement does not preclude using care modalities proven efficacious in studies published subsequent to the current revision of this document. This document is not intended to impose standards of care preventing selective variances from the recommendations to meet the specific and unique requirements of individual patients. Adherence to this Statement is voluntary. The clinician in light of the individual circumstances presented by the patient must make the ultimate judgment regarding the priority of any specific procedure.

Implementation of the Guideline

Description of Implementation Strategy

Applicability Issues

Patients should be given small ice cubes that can be easily moved around in the mouth without causing irritation. Ice should be replenished as it melts, and patients should be instructed to move the ice in an attempt to keep the entire oral cavity cold. The use of flavored ice may be useful in promoting compliance in pediatric patients.

For bolus 5-fluorouracil (5-FU), oral cryotherapy should be initiated five minutes prior to the start of the infusion and maintained for a total of thirty minutes. For melphalan and high dose carmustine, etoposide, cytarabine, and cyclophosphamide (BEAC) chemotherapy regimens, oral cryotherapy should begin at the start of the infusion and be maintained for the duration of the infusion.

NGC Status

This NGC summary was completed by ECRI Institute on December 2, 2013.

Copyright Statement

This NGC summary is based on the original full-text guideline, which is subject to the following copyright restrictions:

Copies of this Cincinnati Children's Hospital Medical Center (CCHMC) Best Evidence Statement (BEST) are available online and may be distributed by any organization for the global purpose of improving child health outcomes. Examples of approved uses of CCHMC's BEST include the following:

- Copies may be provided to anyone involved in the organization's process for developing and implementing evidence-based care guidelines.
- Hyperlinks to the CCHMC website may be placed on the organization's website.
- The BEST may be adopted or adapted for use within the organization, provided that CCHMC receives appropriate attribution on all written or electronic documents.
- Copies may be provided to patients and the clinicians who manage their care.

Notification of CCHMC at EBDMInfo@cchmc.org for any BEST adopted, adapted, implemented or hyperlinked to by a given organization and/or user, is appreciated.
